

arm

STM32L4xx-v1.1.0

Errata

28/2/2019

Errata List

1. Flow control pins

1. Flow control pins

Cellular modems used in the reference designs require hardware flow control to prevent packet corruption

This mod swaps the pinout order, such that MCU pins which are capable of providing flow control are routed to the pins on which the modem will expect to find these signals.

This errata will be fixed in v1.2.0

1. Flow control pins
